

ALL-SPEC COMPOST SPREADER

Innovative, wide-mouth design allows ease of use to shovel in media or to dump “bagged” content. The hinge on our door is solid and travels across the width of the door without opportunity for debris to hang up in the hinge. Our catch is on the side, allowing quick access, and will not be abused by being rolled on.

BUILT TO LAST.....Utilizes 12/14 gauge steel. The handle is a heavy duty 1 piece design instead of hitch pins that come apart or break with friction, yet ergonomically rounded for easy maneuverability. More comfortable for someone who will be pushing it all day long. The red powder coat finish is more eye-catching so it won't accidentally get left behind at the job site.

Part # **AS-CS-24**
List price per unit \$160.00

ALL-SPEC SOD ROLLER

The All-Spec Sod Roller was designed to last through years of use. Competitor models are made with 18 gauge steel. Ours is made with 12/14 gauge steel for durability. Our sod roller can contain up to 200 lbs. in water weight. The heavy duty 1 piece handle is ergonomically designed to allow pinpoint control while rolling hundreds of pounds of water. Thicker and more solid welds are noticeable on the outside of the cylinder. The plug is a top of the line compression fitting. The red powder coat finish is more eye-catching, so it is not easy to leave behind.

Part # **AS-SR-24**
List price per unit \$170.00
